

ABSTRACT

An individual wrapping body for wrapping an interlabial pad in which the number of live microorganism is suppressed and an exterior container for enclosing more than one individual wrapping bodies. The individual wrapping body prevents microorganisms from entering the female genitals from outside and maintains the state of equilibrium of indigenous microorganisms. The individual wrapping body includes an interlabial pad and an individual wrapping body for covering and enclosing the whole portion of the interlabial pad. A processing for suppressing the number of live microorganism is applied to the interlabial pad and, by the processing, the number is suppressed to be 100 or less for a period of 6 months after the manufacture. Also, provided is a package for surrounding two or more of the individual wrapping bodies.
